Important Safety Instructions

CAUTION

- Read the entire instruction manual before you start assembly and installation. If you have questions about any of the instructions or warnings, contact Tripp Lite Support.
- Use with products heavier than the rated weights indicated may result in instability, causing possible injury.
- Mounts must be attached as specified in these instructions. Improper installation may result in damage or serious personal injury.
- Safety gear and proper tools must be used. This product should only be installed by professionals.
- This product is designed to be installed on wood stud walls, solid concrete walls or brick walls.
- Ensure the supporting surface will safely support the combined weight of the equipment and all attached hardware and components.
- Use the mounting screws provided and **DO NOT OVERTIGHTEN** the mounting screws.
- This product contains small items that could be a choking hazard if swallowed. Keep these items away from children.
- Check that the bracket is secure and safe to use at regular intervals (at least every three months).

WARNING

- Make sure that mounting screws are anchored into the center of the studs. Use of a stud finder is highly recommended.
- Installers are responsible to provide hardware for other types of mounting situations.
- Installers must verify that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.

1b. Mount on Solid Brick or Concrete Block

Find and mark the exact location of mounting holes

Drill pilot holes

Ensure holes are level

Screw mount into wall

WARNING

- When installing wall mount onto a concrete masonry unit (also known as a CMU or cinder block), verify the actual concrete thickness is at least 1-3/8" (35 mm) in order to hold the concrete anchors. **DO NOT DRILL INTO MORTAR JOINTS!** Be sure to mount the assembled wall-mount plate with the included concrete anchors, D6 washers and anchor bolts onto solid sections of the blocks. The solid sections can generally be found 1" (25 mm) toward the middle of the block from either end. An electric drill on a slow setting is recommended to drill the hole rather than a hammer drill to avoid breaking out the back of the hole when entering a hollow section.
- The installer must verify the supporting surface will safely support the combined load of the equipment and all attached hardware and components.

2. Install Adapter Brackets
